Connexus-Voice

Enabling Next Generation IP Telecommunication

Connexus-Voice provides access to a next-generation IP network which prioritises traffic and routes voice at significantly reduced cost and vastly improved quality compared to traditional methods.

In the current global climate of increased connectivity and mobility, customers need a telecommunications partner who can offer technology platforms that cater for their evolving convergence needs. Huge has negotiated detailed agreements with a number of leading network providers, giving Huge access to the very best the South African market has available. Huge is able to offer carrier-grade voice and data solutions specifically designed to address the unique requirements of each customer.

Significant Cost Savings

- Implementing a managed voice solution allows customers to save money across all call classifications such as:
 - Local calls
 - National calls
 - International calls
 - Inter-branch calls
 - Inter-community calls
- One rate across all GSM networks
- All calls are charged in pure per-second increments with no minimum billing
- Connectivity and equipment charges are easily recovered from the substantial savings
- Inbound revenue when 087 numbers are used

Superior Voice Quality

- Premier local, national and global least cost routes across one integrated MPLS global network with Points of Presence (PoPs) in 39 locations
- Voice calls are optimally compressed without compromising quality

Unlimited Connectivity Options

- A range of options are available to connect all sites using:
 - Diginet
 - WiMax
 - ADSL
 - Microwave
- Huge Telecom's independence and non-alignment with any single network provider enables us to offer our customers a choice of alternative network routing solutions from credible first and second tier providers

Exceptional Management

- Proactive network management and monitoring 24x7x365
- A dedicated single point of contact
- Tailored service level agreements guaranteeing quality and service delivery

Premier local, national, mobile and global least cost routes across one integrated global MPLS network with Points of Presence (PoPs) in 39 locations

Based upon the findings of Huge Telecom's site audit, we will propose a solution designed to optimally route all telecommunications traffic at the lowest cost
